The Temp1000 is engineered for remote temperature recording in harsh environments. Its rugged enclosure lends itself to applications such as dishwashers and sterilization, and commonly used in environmental studies, food storage, medical and pharmaceutical applications.

The Temp1000 is submersible up to 150' (45m) of water and can record temperatures of up to +80°C (+176°F).

With the capability to record up to 32,767 data points and to record every two seconds, data can be captured even for brief events. The user-replaceable battery is rated to one year of typical use. The non-volatile memory will hold valuable data indefinitely even if the battery should become discharged.

The MadgeTech software will display data in degrees of Celsius, Fahrenheit, Kelvin and Rankine. The powerful software can export the data to an MS Excel® spreadsheet with one click.

**MadgeTech Data Recorder Software** displays temperature data in an easy to use graph.

The Windows®-based software package allows the user to effortlessly collect, display and analyze data. A variety of powerful tools allow you to examine, export, and print professional looking data with just a click of the mouse.
